

## CABLE SEMICONDUCTIVE SHIELD COMPOSITIONS

### Abstract of the Disclosure

A composition comprising:

(a) one or more copolymers selected from the group consisting of (I) a copolymer of ethylene and vinyl acetate containing about 10 to about 50 percent by weight vinyl acetate and having a melt mass flow rate of about 1 to about 100 grams per 10 minutes; (II) a copolymer of ethylene and ethyl acrylate containing about 10 to about 50 percent by weight ethyl acrylate and having a melt mass flow rate of about 1 to about 100 grams per 10 minutes; and (III) a copolymer of ethylene and butyl acrylate containing about 10 to about 50 percent by weight butyl acrylate and having a melt mass flow rate of about 1 to about 100 grams per 10 minutes, and based upon 100 parts by weight of component (a):

(b) about 55 to about 200 parts by weight of a linear copolymer of ethylene and an alpha-olefin having 3 to 12 carbon atoms, the copolymer having a melt mass flow rate of about 0.1 to about 30 grams per 10 minutes and a density of 0.870 to 0.944 gram per cubic centimeter;

(c) about 5 to about 50 parts by weight of polypropylene having a melt mass flow rate of about 0.5 to about 30 grams per 10 minutes and a density of 0.900 to 0.920 gram per cubic centimeter;

(d) about 2 to about 50 parts by weight of an organopolysiloxane having the following formula:  $R^1_x R^2_y SiO_{(4-a-b)/2}$

wherein  $R^1$  is an aliphatic unsaturated hydrocarbon group;  $R^2$  is an unsubstituted or substituted monovalent hydrocarbon group excluding aliphatic unsaturated hydrocarbon groups;  $x$  is equal to or greater than 0 but less than 1;  $y$  is greater than 0.5 but less than 3;  $x+y$  is greater than 1 but less than 3;  $a$  is greater than 0 but equal to or less than 1; and  $b$  is

-34-

equal to or greater than 0.5 but equal to or less than 3;

(e) about 10 to about 350 parts by weight of carbon black; and

(f) optionally, up to about 2 parts by weight of an organic peroxide.
